## TECHNICAL SKILLS

---

- **Languages:** Python, Go, TypeScript, HTML/CSS, SQL, Bash.
- **Frameworks:** FastAPI, React, PlayWright, RabbitMQ.
- **Databases:** Postgres, MongoDB, Redis.
- **DevOps:** Linux, Git, Docker, Kubernetes, GitHub Actions, Terraform.
- **Cloud(AWS):** SQS, EC2, S3, VPC, CloudWatch, IAM.

## EXPERIENCE

---

### Software Engineering Intern

Emma - The sleep Company

Lisbon, Portugal

April 1, 2026 - Present

- Contributing to backend services and API integrations within the Operations Backbone team, supporting internal data flows across logistics and warehouse systems.

### Backend Software Engineer Intern

FlyRobotics

Tomar, Portugal

April 2025 - August 2025

- Designed and built a FastAPI backend serving as the core API layer between robotics systems and a React frontend, enabling reliable real-time data exchange.
- Designed and optimized a PostgreSQL schema for time-series device data, improving query efficiency for measurement retrieval and analysis.
- Implemented REST APIs services with Pydantic validation, structured logging, and comprehensive unit/integration testing, reducing debugging time and improving system reliability.

## PROJECTS

---

### OmniPrice — dynamic pricing system | FastAPI · Typescript · MongoDB · React · Docker · Terraform · AWS

- Built a FastAPI backend with MongoDB and RabbitMQ-based job queues to handle asynchronous competitor price scraping workflows
- Developed a React + TypeScript dashboard that integrates directly with backend APIs for auth, products, competitors, pricing, analytics.
- Containerized services with Docker, provisioned AWS(S3/EC2) infrastructure using Terraform, and set up GitHub Actions CI/CD pipelines for repeatable builds and automated deployments.

### LagWatch — Out-of-Band PC Lag Triage Service | Golang, Linux, Javascript, HTML5/CSS3

- Built a lightweight single-host observability and recovery service in Go using concurrent collectors and a buffered-channel aggregator to capture CPU, memory, disk, and network telemetry with low runtime overhead.
- Implemented real-time system monitoring REST APIs and SSE plus a mobile-first browser UI for out-of-band triage from phone/tablet when the desktop is degraded.

## EDUCATION

---

### Manisa Celal Bayar University

Bachelor of Science in Software Engineering (Fully funded Scholarship)

Manisa, Turkey

September 2022 - June 2026

- **Relevant Coursework:** OOP, Data Structures and Algorithms, Computer Networks, Software Testing, Software Design and Architecture, Software Requirements and Analysis, Service-Oriented Architecture, Database Management System.
- **Honors:** Sole department representative for Erasmus+ Exchange Program for Spring 2025 semester.

### Instituto Politécnico de Tomar

Erasmus+ Exchange Study program in Computer Engineering

Tomar, Portugal

Feb 2025 - July 2025

- **Relevant Coursework:** Operating Systems, Project Management, DevOps, Intelligent Systems, Internet of Things.
