TECHNICAL SKILLS

- **Languages/Databases:** Python, Go, TypeScript, PostgreSQL, MongoDB, Bash.
- **Web Frameworks:** FastAPI, Fastify, React.
- **DevOps/Cloud:** Docker, Kubernetes, AWS, GitHub Actions, Prometheus/Grafana, Linux.
- **Developer Tools:** Git, Postman, VS code, Jira/Confluence, AI-Assisted development(Codex, Claude Code).

EXPERIENCE

Software Engineer

Lisbon, Portugal

Emma - The sleep Company

March 2026 - Present

- Owned and delivered **2 internal platform pages** for supplier and warehouse configuration across **4 layers** - PostgreSQL, Go microservice APIs, TypeScript/Fastify BFF, and Next.js/React - enabling operations teams to manage routing/configuration without developer intervention.
- Implemented automated error-notification routing inside a Go microservice using **AWS SQS, PostgreSQL, scheduled jobs, and microservice-to-microservice integration** with the company email service, reducing manual follow-up work by **100+ hours**.
- Shipped **17+ production Jira tickets** for an ERP-integrated logistics platform, improving configurable email routing, validation safeguards, audit logging, multi-value filtering, and operational visibility for warehouse/order processing workflows.

Software Engineer(Internship)

Tomar, Portugal

FlyRobotics

March 2025 - August 2025

- Designed and built a FastAPI backend serving as the core API layer between robotics systems and a React frontend, enabling reliable real-time data exchange.
- Designed and optimized a PostgreSQL schema for time-series device data, improving query efficiency for measurement retrieval and analysis.

PROJECTS

Visit Wolaita — Cultural Tourism & Generative AI Platform | React 19 · Cloudflare Workers · Gemini API

- Architected a responsive tourism platform using React 19, React Router 7, and Vite, engineering a zero-dependency design system with CSS custom properties, dynamic routing, and interactive media lightboxes.
- Implemented a serverless edge backend on Cloudflare Workers integrating the Google Gemini API (gemini-3.5-flash-lite), leveraging prompt grounding and conversation history tracking to deliver real-time, context-accurate travel assistance.
- Built "Dunguza AI", an interactive virtual try-on studio that processes client-side image uploads via HTML5 FileReader and Blob APIs, pipelining them to a generative vision model for real-time garment rendering.
- Designed a bilingual internationalization (i18n) system supporting English and Amharic (Ethiopic script) with localStorage persistence, coupled with WCAG accessibility patterns and deterministic SVG placeholder rendering.

LagWatch — Out-of-Band PC Lag Triage Service | Golang, Linux, Javascript, HTML5/CSS3

- Built a lightweight single-host observability and recovery service in Go using concurrent collectors and a buffered-channel aggregator to capture CPU, memory, disk, and network telemetry with low runtime overhead.
- Implemented real-time system monitoring REST APIs and SSE plus a mobile-first browser UI for out-of-band triage from phone/tablet when the desktop is degraded.

EDUCATION

Manisa Celal Bayar University

Manisa, Turkey

Bachelor of Science in Software Engineering (Fully funded Scholarship)

September 2022 - June 2026

- **Relevant Coursework:** OOP, Data Structures and Algorithms, Computer Networks, Software Testing, Software Design and Architecture, Software Requirements and Analysis, Service-Oriented Architecture, Database Management System.
- **Honors:** Graduated with Honors • Sole department representative for Erasmus+ Exchange Program.

Instituto Politécnico de Tomar

Tomar, Portugal

Erasmus+ Exchange Study program in Computer Engineering

Feb 2025 - July 2025

- **Relevant Coursework:** Operating Systems, Project Management, DevOps, Intelligent Systems, Internet of Things.
